

**Amendment to the Claims**

This listing of claims will replace all prior versions and listings of claims in this Application.

**Listing of Claims:**

Claim 1. (Previously Amended) A method of marking a skin for a vehicle interior trim panel consisting essentially of the steps of:

providing a deformable polymer skin layer formed by casting, spray coating, blow molding or thermoforming polymer materials selected from the group consisting of polyvinyl chloride, polyurethane, polyethylene, polypropylene, thermoplastic polyolefin, and acrylonitrile-butadiene-styrene polymers said deformable skin layer having a color, and an outer skin layer surface;

providing a substrate layer;

providing a polyurethane foam layer bonded directly to said substrate layer and to said colored skin;

providing one or more switches embedded in said foam layer and underlying said colored skin layer;

activating a laser, said laser emitting a laser beam;

projecting said laser beam on to said outer skin surface in an area that overlies said one or more switches such that a portion of the outer skin surface contacted by said laser beam changes color relative to a portion of said outer skin surface not contacted by said laser to create a marking to indicate where a force may be applied to deform said skin and actuate said one or more switches.
